I can pass the shortest path test while the priority queue test all fail. I cannot figure out how this happens. Isn't that the implementation of priority queue is the fundamental base for shortest path? And I do not know where and how to debug right now.

```
224
225 * Running test #4
226 * Arguments: paths/airports.txt paths/flights.txt paths/query1.txt
227 +++ PASSED test #4
228
229 * Running test #5
230 * Arguments: paths/airports.txt paths/flights.txt paths/query2.txt
231 +++ PASSED test #5
232
233 * Running test #6
234 * Arguments: paths/airports.txt paths/flights.txt paths/query3.txt
235 +++ PASSED test #6
236
237 * Passed 3/6 tests
